Parrot: Pecs Aimed at Routine and Recognizing Object Types.

Parrot is ment to be an electronic android based replacement for physical Pecs, making the everyday lives easier for autists and their guardians. Parrot will be able to handle a large number of pecs aswell recordings of the assicated words and descriptive text. Parrot will enable the user to construct sentences using the digital pecs and playback the sentences for comunication. Parrot should be able to download new pecs from the central server and utilize them in the same manner as native ones. Parrot should also be able to combine Pecs to give a new meaning. Parrot will be easily configurable on a user to use basis.
